ABOUT ME

I am a highly skilled and dedicated Golang developer with 5 years of experience, specializing in building robust and scalable software solutions. Proficient in technologies such as Gin, Postgres, Redis, AWS, Kubernetes, Docker, and microservice architecture, I adhere to SOLID and DRY principles, ensuring maintainable and extensible code. Committed to writing clean and readable code, I deliver high-quality solutions that align with industry best practices. Seeking opportunities to contribute my expertise and drive innovation, I am excited to leverage my skills to support your organization's success.

EDUCATION

Bachelors of Applied Mathematics - Wentworth University 2017-2019 *Boston, USA*

WORK EXPERIENCE

Automatization Engineer - Siemens Healthineers July 2019 - April 2022 *Erlangen, Bavaria, Germany, Remote*

- Developed efficient automation solutions using Python, Golang, docker-compose, Redis, and Postgres, resulting in significant time savings of 60-80% for multiple departments.
- Led the development and implementation of two critical business intelligence reports, utilizing SQL and various BI tools, providing valuable insights and driving informed decision-making within the company.
- Built a monolith analytical tool using Python and Flask, enabling comprehensive data analysis and reporting capabilities for the organization.
- Utilized SQL and various BI tools to analyze and manage work, measuring efficiencies and identifying areas for improvement.
- Recognized as the "Employee of the Year 2022" for outstanding contributions and dedication.

Golang Developer - Gaskar Technologies March 2022 - August 2023 *Istanbul, Turkey, Remote*

- Developed microservices using Golang, Postgres, Redis, Kafka, S3, Docker, and Kubernetes, effectively supporting the company's rapid growth and ensuring scalability.
- Built Continuous Integration (CI) pipelines and .helm templates from the developer's perspective, streamlining the deployment and release processes.
- Spearheaded the creation of multiple services from scratch, leveraging innovative technologies to meet the evolving needs of the company in its dynamic and fast-paced environment.

Golang Developer - Avito Tech September 2023 - Present *Yerevan, Armenia, Remote*

- Developing microservices using Golang, Postgres, Redis, Kafka, S3, Docker, and Kubernetes, driving the adaptability and expansion of the organization.
- Conducting comprehensive research and integrating novel functionalities into the project, along with proficient debugging to ensure smooth operation.
- Ensuring code clarity and conducting thorough peer reviews of team members' code, contributing to a robust and collaborative development environment.

PROJECTS

Bicas - online crypto casino September 2022 - March 2023 *Athens, Greece*

- Spearheaded the development of the backend infrastructure for the online crypto casino website using the Go programming language.
- Pioneered the creation, testing, and maintenance of a blockchain network, constructed on top of the Cosmos SDK.
- Crafted intricate WebAssembly (WASM) smart contracts to enhance the functionality and security of the platform.

SKILLS

Developing Skills: Go, Python 3, Rust, SQL, Docker, Kubernetes, CI/CD, Redis, Postgres

Other Skills: Databases, Unit Testing, Test Automation (Grafana, Prometheus, Allure-Go), Algorithms

Soft Skills: Effective Communication, Strong Team Player, Adaptability, Fast Problem Solving
